Say goodbye to downtime with our high-availability cloud hosting

As a gold certified partner of Veeam, ACE MICRO's large hosting sites in Tier III data-centers in Kenya can restore our clients' full server environments without complex network configurations.

[Solutions → Cloud Services](#)

Flexible Multicloud strategies

Here are a few reasons to consider our cloud hosting services:

- Scalability: Our cloud hosting solutions can scale up or down to meet your business needs, ensuring that you only pay for what you use.
- Reliability: Our cloud infrastructure is built on top of the best-in-class technologies, to ensure that your data is always safe and accessible.
- Security: We take security seriously, with built-in firewalls, intrusion detection, and regular backups to protect your data from threats.
- Local Support: Our team of cloud hosting experts is always available to help you with any issues or questions you may have.

We offer a range of cloud hosting services that are designed to meet the diverse needs of our clients, whether they are looking for private, public, or hybrid cloud solutions, as well as managed hosting solutions that take the hassle out of managing your own infrastructure. Our Cloud hosting services include:

Infrastructure as a Service (IaaS)

i.Monitoring & Management

We provide a fully virtualized infrastructure that is scalable, flexible, and easy to manage. This is made possible by the utilization of the VMware vCloud Director. Our platform enables a quick spin-up of virtual machines and other resources, monitor the performance and availability of your infrastructure, and manage and configure resources easily.

The monitoring and management tools provide real-time visibility into the virtual infrastructure, enabling a proactive approach to identifying and resolving issues before they impact the business. The platform also offers automatic scaling, load balancing, and security management capabilities to ensure that the infrastructure is always performing optimally and is secure.

ii.DR & Backup

Our DR & Backup solution ensures that business-critical data and applications are always secure and available.

Our offering includes;

- Secure backup of data and applications in the cloud
- Quick recovery of data and applications in case of a disaster
- Automatic backups and recovery processes to save time and reduce errors
- Customisation of DR & Backup policies to meet specific needs
- Minimised downtime to ensure business continuity

iii.Assessment & Migration

The assessment and migration to Ace Micro Services VMware Verified Cloud or Hyperscalers process includes a comprehensive analysis of the existing infrastructure, including applications, data, and infrastructure components, to determine the best cloud migration strategy for the business.

The range of assessment and migration service offering includes;

- Application and workload discovery
- Migration planning and design
- Optimisation of infrastructure for cloud deployment, including scalability, performance, and security
- Migration and synchronisation of applications, data, and infrastructure to the cloud with minimal disruption to business operations
- Post-migration optimization services to help fine-tune the cloud infrastructure for optimal performance and cost-effectiveness.

Product as a Service (PaaS)

Our PaaS model provides you with a preconfigured platform that includes all the tools and services you need to develop, deploy, and manage your applications in the cloud. With support for a wide range of programming languages and frameworks, you can use the technologies you're already familiar with, or branch out and explore new ones with ease.

i.XaaS

Headline: We help you streamline your workflows, reduce costs, and improve your overall productivity.

Our XaaS offers a complete solution that simplifies the cloud journey. We give you the best of both worlds... all the benefits of a PaaS environment, including scalability, flexibility, and ease of use, with the added bonus of access to a wide range of cloud services that can be integrated seamlessly into your applications, including storage, security, and analytics.

ii.Developer Services

Our developer services provide a complete solution that delivers all the tools and services you need to build, deploy, and manage your applications in the cloud, accelerating your development processes and helping you stay ahead of the curve. The services are designed to work seamlessly with our PaaS environment, providing a cohesive and integrated solution that streamlines the entire development process.

And with our fully managed environment, there's peace of mind knowing that your applications are running on the latest and most secure software versions. Plus, with our built-in scalability and security features, your applications can handle any amount of traffic and stay safe from any potential threats.

iii.Application Services

Our application services include everything from performance monitoring and log management to error reporting and analytics tools. You can easily add functionality and features to your applications, without the need for additional infrastructure.

We enable our clients to build applications that are secure, scalable, and always up to date. We provide assurance that our clients' applications are running on the latest and most secure software versions. Plus, with the built-in scalability and security features, the applications can handle any amount of traffic and stay safe from any potential threats.

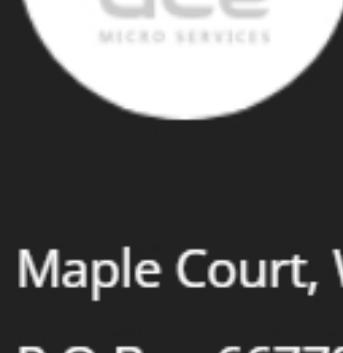

iv.Platform Services

Our platform services include everything you need to ensure your applications are secure, compliant, and always up to date.

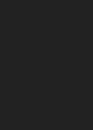

Our DBaaS platform service offers a fully managed database solution that eliminates the need for manual setup and maintenance. And when it comes to security, we got you covered with built-in security features, such as encryption, access control, and network security. The platform services include compliance solutions to help you meet regulatory requirements.

v.Cloud Native Services

Our cloud native services include everything from container orchestration and microservices management. This means you can run cloud-native applications that are designed to be scalable, resilient, and secure.

Secure, Efficient, and Flexible Data Center Solutions for Your Business

Ace Micro Services understands the critical importance of data to businesses. That's why we offer a wide range of scalable data centre solutions that are tailored to meet your specific needs.

Whether you need a secure facility to house your servers or want to leverage the power of cloud computing, we have the right solution for you.

[Solutions → Data Centre Solutions](#)

Our Data Center Solutions include:

i. Robust Infrastructure

Our data centre is equipped with the best-in-class technology and redundant power systems, ensuring uninterrupted operations and minimal downtime. With advanced cooling and environmental controls, we maintain optimal conditions for your sensitive equipment and data.

ii. Security and Compliance

Our data centre features multi-layered physical security measures, including surveillance systems, access controls, and biometric authentication.

iii. Connectivity and Networking

Enjoy high-speed connectivity with our carrier-neutral data centers. We offer direct connections to our cloud or other major cloud providers, internet exchanges, and network service providers, enabling seamless and efficient data transfer. Our redundant network architecture guarantees reliable and low-latency connectivity.

iv. Disaster Recovery and Business Continuity

Safeguard your business against unforeseen events with our disaster recovery solutions. Our data centre is equipped with redundant backup systems, geographically diverse replication, and failover mechanisms to ensure business continuity and minimize data loss.
